- 200 programmable PLUs
- Built-in tally roll printer
- RS-232 output and USB port
- Numerical keyboard
- Large LCD display
- Hi/lo alarm
- Built-in clock
- Mains powered

Trade Approved

The DI-620P is a Trade Approved indicator, meaning that you can meet legal requirements when buying or selling goods based on weight

Rigorous testing ensures the scale delivers repeatable weight readings which are highly accurate and the customer receives value for money with a scale that they know is fit for purpose.

Streamline your process

The indicator has 200 programmable PLUs, which enables easy access to stored weight readings. These can be updated via the USB port.

The hi/lo alarm will alert you when a load is over the required weight, under, or if it's the exact weight it needs to be. The indicator also has a simple counting function, ideal for loading vehicles.

Built-in printer

Weight, date and time can be printed from the tally roll printer. The print out can also show the individual weight readings and the total at the end, if accumulation is used.

The DI-620P creates a print out quickly and easily, which is ideal for updating paper records, attaching weight readings to shipments, or issuing a proof of weight to customers.

Dimensions: 275mm x 120mm x 195mm

Number of PLUs: 200

Functions: Tare/pre-set tare, Zero, and Counting

Power Supply: Mains

Approvals: Trade Approved

Warranty Period: 1 Year
