Simple weighing

The M-200 is a simple and easy to use chair scale, which has been manufactured from the highest quality materials to ensure longevity and accuracy.

This scale is suitable for use in many hospital departments, including outpatients departments, general wards and is suitable for heavy use and high traffic areas with many patients.

Extra wide seat

In order to help accommodate more patients, we designed the M-200 to have a larger seat than standard chair scales to provide more room for patients.

The M-200 is also available in capacities of 250kg and 300kg, to enable us to provide our customers with highly accurate readings for their patients, making monitoring, diagnosis and treatment easier.

Optional connectivity options

The M-200 is available with either Bluetooth or Wi-Fi connectivity to ensure that our customers are able to transfer data seamlessly or input into EPR systems.

We would simply need to insert a connectivity module at the time of order and then provide you with our standard protocols for easy and simple integration into your existing system.
