Powered seat to help patients

Chair scales are essential when a patient or resident needs to be seated whilst being weighed, especially those with limited mobility.

The M-250 changes this. Using the remote control, the seat steadily tilts, slowly raising patients to an upright position, easing them steadily onto their feet with the help of a medical professional.

Simple weighing

The M-250 is a simple and easy to use chair scale, which has been manufactured from the highest quality materials to ensure longevity and accuracy.

This scale is suitable for use in many hospital departments, including outpatients departments, general wards and is suitable for heavy use and high traffic areas with many patients.

Optional connectivity options

The M-250 is available with either Bluetooth or Wi-Fi connectivity to ensure that our customers are able to transfer data seamlessly or input into EPR systems.

We would simply need to insert a connectivity module at the time of order and then provide you with our standard protocols for easy and simple integration into your existing system.
